

Customers		
PK	customer_id	SERIAL
	first_name	VARCHAR(30)
	last_name	VARCHAR(30)
	phone_number	VARCHAR(10)
	email	VARCHAR(30)

Tickets		
PK	ticket_id	SERIAL
	movie	VARCHAR(30)
	time	TIME
	date	DATE
	price	DECIMAL

I choose only 1 customer here because a customer can only have 1 order at a time. but I put zero to many on the other end because once the customer has been established they can have many orders at different times.

I choose only 1 ticket id because you can only have one ticket id per transasion but you can have from zero to many different ids in the order from many different customer.

I choose only one because a customer can only have 1 ordered at a time. but many different customers can order at the same time.

Concessions		
PK	concession_id	SERIAL
	item_ordered	VARCHAR(30)
	price	DECMIAL

orders		
PK	order_id	SERIAL
FK	customer_id	INTEGER
FK	ticket_id	INTEGER
FK	concession_id	INTEGER
FK	movie_id	INTEGER

I choose only one because you can only have 1 id for every movie and each ticket can only have on movie showing on it. but zero to many orders because you can have many different tickets of that one movie id from different customers

Movies		
PK	movie_id	SERIAL
